

The data for 2023 Index is mostly from 2021 and 2022.

Progress in gender equality

With 74.7 points out of 100, Luxembourg ranks 7th in the EU on the Gender Equality Index. Its score is 4.5 points above the score for the EU as a whole.¹

Since 2010, Luxembourg's overall score has increased by 13.5 points, mainly due to improvements in the domain of power (+ 38.8 points). Since 2020, Luxembourg's score has increased by 1.2 points. This can be attributed to increases in the domains of power (+ 4.7) and work (+ 3.3). As a result, Luxembourg's ranking has risen by two places since 2020, moving up to the 7th place.

[1] The Gender Equality Index 2023 has been affected by certain changes in EU-wide surveys and through the use of the most up-to-date sources. For the first time, it benefits from EIGE's survey data on gender gaps in care, individual and social activities carried out across the EU in 2022, and from new data from the 2021 EWCTS survey (Eurofound). Regulation (EU) 2019/1700, which came into force from 1 January 2021, also introduced some changes into the EU-LFS. These methodological changes will affect nine indicators included in the domains of work, knowledge and time, together with their respective scores, as well as the overall Index and the analysis of intersecting inequalities using the respective indicators.

An analysis has been carried out of the possible impact that these changes may have had on the Index and on the interpretation of the corresponding time series. Despite the break in time series that the changes entail, the time series analysis can be considered adequate (see Index 2023 report).

Best performance

Luxembourg's highest ranking (1st among all Member States) is in the domain of money, in which it scores 93.9 points. Luxembourg's score in this domain has increased by 1.3 points since 2020, and the country's ranking has remained unchanged. Within this domain, Luxembourg also ranks 1st in the sub-domain of financial resources, in which it scores 98.0 points. Luxembourg's score for this sub-domain has remained unchanged since 2020, and the country has consistently ranked 1st in the EU since 2010.

Most room for improvement

Gender inequalities in Luxembourg are strongly pronounced in the domain of power. The country scores 64.4 points in this domain, ranking 10th in the EU. Since 2020, Luxembourg's score in this domain has increased by + 4.7 points. In the sub-domain of economic decision-making, the country ranks 12th, with a score of 57.8 points. Luxembourg also ranks 12th in the sub-domain of political decision-making, with a score of 60.9 points.

Biggest improvement

Since 2020, Luxembourg's biggest improvement has been in the domain of work. In this domain, the country moved up the rankings from 7th place to 4th. Luxembourg's score for the domain of work is 79.6 points – an increase of 3.3 points since 2020. Improvement in Luxembourg's score for the sub-domain of segregation and quality of work (+ 4.2 points) has been the key driver of this change. Since 2020, Luxembourg has moved up the ranking from 8th to 4th in this sub-domain.

A step backwards

Since 2020, Luxembourg has experienced a setback in the domain of time, dropping from 8th to 18th position. The country scores 62.8 points in this domain, a decrease of 6.3 points since 2020. This drop in ranking can be attributed to a decrease in points in the sub-domain of social activities (– 14.6 points), in which Luxembourg dropped 13 places to the 23rd place.

Convergence

Upward convergence in gender equality describes increasing equality between women and men in the EU, accompanied by a decline in variations between Member States. This means that countries with lower levels of gender equality are catching up with those with the highest levels, thereby reducing disparities across the EU. Analysis of convergence patterns in the Gender Equality Index shows that disparities between Member States decreased over the period 2010–2021, and that **EU countries continue their trend of upward convergence**.

Looking more closely at the performance of each Member State, patterns can be identified that reflect a relative improvement or slipping back in the Gender Equality Index score of each Member State in relation to the EU average.

Luxembourg is *outperforming* other Member States. Its Gender Equality Index score is above the EU average, and has grown at a faster rate. The gap between the country and the EU average has widened over time.

Violence

A lack of evidence to assess violence against women

No score is given to Luxembourg in the domain of violence, due to a lack of comparable EU-wide data.

Femicide

In 2021, 720 women were murdered by an intimate partner, family member or relative in 17 EU Member States, according to official reports. Luxembourg does not provide comparable data on femicide.

Source: Eurostat, 2021

Violence at a glance

Intimate partner violence

No data is available. Data on intimate partner violence will be updated in 2024 using Eurostat data complemented by the survey on violence against women carried out by FRA and EIGE.

Sexual harassment at work

No data is available. Data on sexual harassment at work will be updated in 2024 using Eurostat data complemented by the survey on violence against women carried out by FRA and EIGE.

Istanbul Convention: state of play

The Istanbul Convention is the most comprehensive international human rights treaty on preventing and combatting violence against women and domestic violence. Luxembourg signed the Istanbul Convention in May 2011, and ratified it in August 2018. The treaty entered into force in Luxembourg in December 2018.

The European Council approved the EU's accession to the Istanbul Convention on 1 June 2023.

EIGE/FRA survey on violence against women

The Fundamental Rights Agency (FRA) and the European Institute for Gender Equality (EIGE) will carry out a survey on violence against women (VAW II) in eight EU Member States (CZ, DE, IE, CY, LU, HU, RO, SE), which will complement the Eurostat-led data collection on gender-based violence and other forms of interpersonal violence (EU-GBV) in the remaining countries. The use of a unified methodology will ensure the availability of comparable data across all EU Member States. Data collection will be completed this year, and the results will be used to update the domain of violence in the Gender Equality Index 2024, with its thematic focus on violence against women.

Thematic focus

The Gender Equality Index 2023 focuses on the socially fair transition of the European Green Deal. Its thematic focus analyses the following aspects:

- **Public attitudes and behaviours on climate change and mitigation**
- **Energy**
- **Transport**
- **Decision-making**

The data was collected through various surveys, such as the EIGE 2022 survey on gender gaps in unpaid care, individual and social activities, as well as other EU-wide surveys.¹ The EIGE survey focused on gender differences in unpaid care, including links to transport, the environment and personal consumption and behaviour.

Focus 2023: The European Green Deal

Women in Luxembourg are more likely to choose environmentally friendly options than men

In 2022, 55 % of women in Luxembourg, compared with 43 % of men, regularly avoided plastic, single-use or disposable products. Similarly, 46 % of women, compared with 32 % of men, regularly chose environmentally friendly options in child-care activities; for example, by avoiding single-use items, buying second-hand goods, and educating the children under their care about environmental issues.

Fewer people in Luxembourg are behind on their utility bills compared with the EU average

In 2021, persons with low educational attainment were the most likely in Luxembourg to struggle to pay for their energy consumption, with 6 % of women and 4 % of men in this group reporting being in arrears with utility bills. In the same year, women (5 %) and men (3 %) with a non-EU migrant background struggled to keep their homes warm. Similarly, women and men with disabilities (both 5 %) reported being in arrears with their utility bills.

Women are underemployed in the transport sector in Luxembourg and underrepresented in decision-making roles

The share of women working in the transport sector in Luxembourg was only 19 % in 2022, which was marginally lower than the EU average of 22 %. There was also a smaller share of women than men employed as senior administrators in national ministries dealing with the environment and climate change (25 % in 2022). This was lower than the EU average of 44 % for the same year.

[1] The following sources were used: the EIGE survey on gender gaps in unpaid care, individual and social activities; the European Social Survey; Eurostat-LFS; EU-SILC; education statistics; and the EIGE's WiDM.

About Index

The Gender Equality Index is a tool for monitoring progress in gender equality across the EU over time. It measures gender gaps between women and men in six core domains – work, money, knowledge, time, power and health – and is composed of 31 indicators. The Index uses a scale of 1 to 100, where 1 stands for total inequality and 100 for total equality.

Two additional domains are included in the Index, but do not impact a country's final score. The domain of intersecting inequalities highlights how gender inequalities manifest in combination with age, dis/ability, education, family type and migrant background (based on the country of birth). The domain of violence against women monitors, measures and analyses the most common and widely criminalised forms of violence against women across the EU.

The Gender Equality Index 2023 also includes a thematic focus on the socially fair transition of the European Green Deal.

This year's edition of the Index includes a long-awaited update to the domain of time using the EIGE survey on gender gaps in unpaid care, individual and social activities.

EIGE's survey on gender gaps in unpaid care, individual and social activities

This EIGE survey focuses on gender differences in unpaid care in order to better understand how they impact the job opportunities, work-life balance, leisure and social activities of women and men. The survey aims to fill current data gaps and improve the capacity of the Gender Equality Index to capture changes in the domain of time in a more conceptually sound, coherent and regular way. The findings from this EIGE survey will contribute to monitoring the European Care Strategy and the EU Gender Equality Strategy 2020-2025, as reducing the gender gap in care is a key objective of these strategies. The survey was carried out during the summer of 2022, and involved over 60,000 respondents aged 16-74 across the 27 EU Member States.

European Institute for Gender Equality

We are an independent centre and the primary source for information on gender equality in the European Union. We contribute to making the European Union become a Union of Equality, where women and men, girls and boys in all their diversity are free to pursue their chosen path in life, have equal opportunities to thrive, and can equally participate in and lead our societies.
